## DETENT CONFIGURATIONS EXAMPLES

This innovative PT's with detents family has been specifically developed to allow the integration of otherwise large and expensive external mechanisms into the body of the majority of the 10 \& 15 mm PS/PT/PTC potentiometer series thus allowing a high range of configurations: special tapers, torque, tolerances, linearity, cut track, etc.

This detent design not only adds a "click" sensation of position, but also offers enormous savings in both cost and space for any given application.

Strong and weak detents can be mixed as per cutomer's request.

Detent number and positions can be made or fitted to the customer needs or preferences.

- Relative detent positions along the total mechanical travel
Unless otherwise specified the detents are evenly spaced (using the end points as reference)
*For more than 10 detents versions please contact your nearest PIHER distributor. Mechanical and/or electrical feature may be affected by detents. Please see our separate PTs with detents datasheet at www.piher.net
